

Hospital Performance Analytics Dashboard — User Guide

Key Performance Indicators (KPIs)

KPI	Value	What It Means
Total Hospitals	~5,000	Count of all facilities in the current view
% High-Performing	36%	Hospitals meeting or exceeding the rating threshold
Average Better %	11%	Avg % of measures rated "Better" (Safety + Readmission)
Birthing Friendly %	41%	Hospitals meeting birthing-friendly criteria
Avg Overall Rating	3.1	Average star rating (1-5) across selected hospitals

Using Slicers to Filter Data

Slicers are dropdown filters on the left side of the pages. Use them to narrow the dashboard view:

- **States:** Filter to one or multiple states
- **Hospital Type:** Filter by facility type (Acute Care, Critical Access, Psychiatric, Pediatric)
- **Hospital Ownership:** Filter by ownership (Non-Profit, Government/Public, For-Profit)
- **Emergency Services:** Filter hospitals with or without emergency services
- **Birthing Friendly:** Filter by birthing-friendly designation
- **Rating:** Filter by exact star rating (1 to 5)

"What-If" Scenario Sliders

The Scenario Insights page has interactive sliders to simulate future improvements:

- **Rating Threshold:** Adjust the minimum star rating (1–5) that defines a "High-Performing" hospital.
- **Safety Improvement:** Simulate a % increase in Safety "Better" scores. The projected line chart shows the impact.
- **Readmit Improvement:** Simulate a % increase in Readmission "Better" scores to project improvement outcomes.

Tip: Use the "Default" and "Optimistic" bookmark buttons to quickly switch between preset scenarios.

Dashboard Pages

Page	Purpose
Executive Overview	Primary KPIs, Ownership/Type distribution, Top States by Birthing Friendly %, and Emergency Services distribution.
Hospital Geographic Analysis	Interactive U.S. Map highlighting regional differences and Top 10 States by Avg Overall Rating.
Hospital Performance Measure Details	Domain-level Better/Worse % (Safety, Mort, Readm), Worse Performance breakdown, and a detailed hospital table.
Hospital Performance Scenario Insights	What-If parameter sliders, Projected Safety Improvement curve, and Overall Rating vs Readmission Worse %.

Data Refresh

- **Power BI Desktop:** Click the Refresh button in the Home ribbon. Ensure your CSV source is updated first.
- **Power BI Service:** Scheduled refresh runs automatically based on your organization's configured schedule.
